## **Generation Home Care System Sets Security High**

*Hosted Database Features Sophisticated Database Isolation Mode*

**MOUNT PLEASANT, MICHIGAN — September 1, 2009**—Integrated Database Systems (IDS) is pleased to introduce database isolation mode as standard for its Hosted Service. The Hosted Service is currently available for users of Generations Home Care System, a software program that enables home care agencies to manage client and caregiver data effortlessly. Hosted Services allows not only office staff to access their database over a standard web browser when away from the office, but also allows clients and caregivers read-only access to their schedules.

“Only physical isolation of databases can provide the highest levels of security and performance for our customers,” said Lance Ferden, President of IDS. “Although it requires a slightly higher amount of management on our part, it’s been shown that security conscious organizations, such as health care, show a strong preference for the isolated database model. We are bringing architecture to small business that previously was made available only to large companies”.

Most application providers in the home care industry use a non- isolated or multi-tenant model that has customers sharing data in the same tables within single database. While this method is convenient to the software company, an agency could potentially be sharing their data in the same database as thousands of other agencies.

SAP, the leader in CRM has led the charge in favor of the isolated database model. Today many CRM analysts have sided with the isolated database model as superior to the shared model for security, performance, flexibility, and integration.

MORE

Founded in 2003, Integrated Database Systems, Inc. provides software that manages the day-to-day activities of private duty home care agencies; the software also seamlessly integrates with QuickBooks for billing and payroll. An industry-leading software solution, more than six hundred companies in the United States, Canada, and abroad use Generations Homecare System.
