Generation Home Care System Passes QuickBooks Technical Review

Only software vendor serving private duty homecare to become certified

MOUNT PLEASANT, MICHIGAN — November 24, 2008 — Integrated Database Systems (IDS) was notified today that their flagship product, Generations Home Care System, had successfully passed the QuickBooks independent technical review.

“This is a great example of our commitment to high quality software”, said Lance Ferden, President of IDS. “The technical review not only tests compatibility with QuickBooks, but ensures the application meets best practices for software development. Application security, encryption of sensitive data, and performance are also tested. It shows Intuit is committed to only certifying applications that meet the highest level of quality”.

The technical review was done at the expense of IDS by Intertek, an independent company selected by Intuit to execute the QuickBooks Technical Review. All program specifics, including processes, test design, and program design, were approved and enforced by Intuit.

Founded in 2003 Integrated Database Systems, Inc. provides software that manages the day-to-day activities of private duty home care agencies; the software also seamlessly integrates with QuickBooks for billing and payroll. An industry-leading software solution, more than six hundred companies in the United States, Canada, and abroad use Generations Homecare System.
