Generations Homecare System Unveils Text Messaging Capability

System Users Able to Fill Shifts Faster Than Ever Before

MOUNT PLEASANT, MICHIGAN — June 29, 2009 — With a recent enhancement Integrated Database Systems (IDS), the makers of Generations Homecare System software, has added text messaging capabilities. Available immediately to those who have downloaded the most recent update, text messaging expands and enhances an agency's ability to fill a shift as quickly as possible.

“Adding text messaging just made sense when you look at the typical day running a private duty home care business”, said IDS President Lance Ferden. “It's one of those features that can save the office staff a lot of time and headache.”

There are several ways in which text messaging from Generations can be used to announce the availability of a shift. For example, all available caregivers can receive a text message announcing that a shift is available, and those who want to work will contact the office. Without text messaging the office scheduler would have to call each caregiver separately.

Founded in 2003, Integrated Database Systems, Inc. provides software that manages the day-to-day activities of private duty home care agencies; the software also seamlessly integrates with QuickBooks for billing and payroll. An industry-leading software solution, more than six hundred companies in the United States, Canada, and abroad use Generations Homecare System.
